

# Time to get serious on AML policy in Europe

Karel Lannoo\*

It is estimated that 2-5% of global GDP is laundered annually, with an overall recovery rate of illicit assets at just 1.1% in Europe, according to Europol. Tackling money laundering is a longstanding policy priority, but one pursued with limited success. In the meantime, crime proliferates, citizens see that rule of law does not work and the foundation of civil societies is degraded. The EU Commission is announcing an AML action plan in July, but a new approach is needed.

Taking aim at money laundering is nothing new, but the target has broadened significantly. Over the past two decades, the mandate has grown from crime and drug trafficking-related proceeds to include tax avoidance, terrorist financing, human trafficking and state-sponsored and corporate bribery. At the same time, technological progress has increased the ways and means to launder money.

At the EU level, the Commission is aware of the urgency and has put AML high on its agenda for 2021, with a proposal for a single AML agency (AMLA), and an AML regulation (along with a new directive, the sixth). However, fundamentally new methods are required to detect money laundering. They should consist of a truly risk-based regulatory framework, and enhanced cooperation between financial and non-financial supervisors, financial intelligence units (FIUs), and the judicial authorities. To detect suspicious cases, cooperation tools need to be developed within the private sector, and between the private and public sectors. Ample use of technology must be made, while respecting data privacy, respective competences and free competition.

The regulatory side should be addressed first. A thorough benefit/cost analysis of the AML rules thus far could guide the way to a more measured and effective approach. The banking sector is at the forefront of detecting cases and transmitting information to the authorities, at huge cost and under the threat of multimillion-euro fines and penalties. As much as 95-98% of the suspicious activity detected by the private sector are false positives, which are nonetheless transmitted in thousands of reports it transmits to FIUs. Very few lead to prosecution.

At the supervisory level, states must first put their own house in order first, by streamlining the AML controllers. AML detection requires the cooperation of a multitude of supervisory entities, both financial and non-financial, FIUs and law enforcement officials. In the EU context, this means well over 100 entities. At the non-financial level, such as for the audit and law professions, no EU-wide supervision exists.

## No EU-wide supervision exists

A further bottleneck in AML effectiveness lies with the FIUs, which are designated to examine both cash transaction and suspicious activity reports, and transmit doubtful cases to law enforcement authorities. The FIUs are organised, resourced and staffed very differently across states. Increased cooperation between FIUs is much more urgent than a single EU AML supervisory agency, but it questions EU competence. A single template for suspicious transaction reports (STRs) among FIUs would be a big step forward.

FIUs and law enforcement bodies need more coordination, better resources and support for training, though new training techniques are having a significant effect. But it's hardly credible that governments claim a lack of funding when the fines levied on financial institutions are simply eye-wateringly large.

Lastly, registries of corporates and ultimate beneficial owners (UBOs) need to be much better applied and legal entity identifiers (LEIs) more widely used. LEIs were instituted after the financial crisis, but their utilisation rate is only 2-7% of the eligible entities in the Western world.

At this stage, a single AML agency would be akin to the Stockholm-based European Centre for Disease Control (ECDC) during the Covid-19 crisis, tasked with controlling chronic and epidemic diseases without having the powers or means to do much about it. In the AML domain, such an agency would create the expectation that something will be done, but this requires more harmonisation of judicial procedures and criminal offences, which EU member states have so

## European Credit Research Institute

The European Credit Research Institute (ECRI) is an independent, non-profit research institute that develops its expertise from an interdisciplinary team and networks of academic cooperation partners. It was founded in 1999 by a consortium of European banking and financial institutions. ECRI's operations and staff are managed by the Centre for European Policy Studies. ECRI provides in-depth analysis and insight into the structure, evolution and regulation of retail financial services markets in Europe. Through its research activities, publications and conferences, ECRI keeps its members up-to-date on a variety of topics in the area of retail financial services at the European level, such as consumer credit and housing loans, credit reporting, consumer protection and electronic payments. ECRI also provides a venue for its members to participate in the EU level policy discussion.

For further information, visit the website: [www.ecri.eu](http://www.ecri.eu).

## Centre for European Policy Studies

CEPS is one of Europe's leading think tanks and forums for debate on EU affairs, with an exceptionally strong in-house research capacity and an extensive network of partner institutes throughout the world. As an organisation, CEPS is committed to carrying out state-of-the-art policy research that addresses the challenges facing Europe and maintaining high standards of academic excellence and unqualified independence and impartiality. It provides a forum for discussion among all stakeholders in the European policy process and works to build collaborative networks of researchers, policy-makers and business representatives across Europe.
