Legal Challenges

Challenges to a Token Economy 1/2

- › No legal definition of a “token”;
 - Need for certainty within the framework of a token economy;
 - Lack of clarity surrounding disposal and transfer of tokens, how can you make a legally binding transfer of a token from party to party?
 - How can you enforce token transfers?
- › Can you own a token?
 - Is it a thing in the sense of property law?
 - Can a token represent a physical thing?

Challenges to a Token Economy 2/2

› “Link” between the token and the “real world” physical asset;

- If there is a real world asset, then what if the asset is lost?
- Third party rights to the asset?
- Human error: Token Holder loses his private key or signs a transfer to the wrong address...?
- How can you enforce the transfer of the represented right?
- Mandatory laws?

› Different regulatory approaches across jurisdictions

- Need of requirements for token issuers;
- Traditional centralized intermediaries are normally subject to regulation.

Token & Coins, ERC 20 and More

Token 1/2

- › The term Token has several meanings:
- Token (coin), physical money that is privately minted;
 - Aids for identification (Hardware and Software Tokens);
 - Crypto Currencies;
 - And many more.

Token 2 / 2

```
contract MyToken {
    /* This creates an array with all balances */
    mapping (address => uint256) public balanceOf;

    /* Initializes contract with initial supply tokens to the creator of the contract */
    function MyToken(
        uint256 initialSupply
    ) {
        balanceOf[msg.sender] = initialSupply;           // Give the creator all initial tokens
    }

    /* Send coins */
    function transfer(address _to, uint256 _value) {
        require(balanceOf[msg.sender] >= _value);       // Check if the sender has enough
        require(balanceOf[_to] + _value >= balanceOf[_to]); // Check for overflows
        balanceOf[msg.sender] -= _value;                 // Subtract from the sender
        balanceOf[_to] += _value;                         // Add the same to the recipient
    }
}
```

Are all Tokens Equal? Bitcoin vs. Ethereum

Bitcoin

Ethereum

Token Standards

Bitcoin

Blockchain
BITCOIN

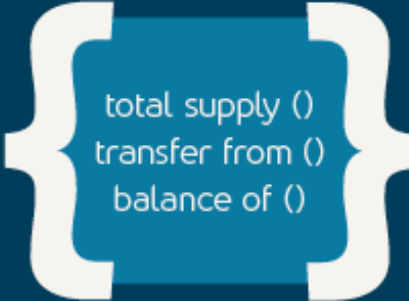

Ethereum

Blockchain

ETH

ERC20

ERC721

Non Fungible Token
(tokenize physical assets)

Token as Information

› A **token** is information that

- Represents an underlying (right), or;
- Does not have anything underlying (e.g. Bitcoin).

› **Underlying**, for example

- An access right to a network;
- Discount on the purchase of a service or product;
- Right of Claim or membership in respect to a legal entity;
- Title to an object.

Functions of Tokens:

> In particular, tokens have the following functions:

Legitimization

(for the benefit of the beneficiary or creditor)

Liberation

(in favor of the debtor)

Transportation

(Transfer of the underlying right)

Legal Definition in Art. 5 P. 1 Cl. 1 of TTL

"Information on a TT System that can represent reasonable claims or membership rights of a person, rights in property, or other absolute and/or relative rights ensuring the assignment of one or more Public Keys."

> Token:

- TT-System;
- Information;
 - Can represent reasonable claims or membership rights of a person, rights to property, and/or other absolute or relative rights;
 - Ensuring the assignment of one or more Public Keys.
